

One Outstanding Performance Deserves Another

**Bose® QuietComfort® 15 Acoustic Noise Cancelling®
Headphones**

Presentation Notes

Years of research have led Bose engineers to develop innovations in the area of active noise cancellation. That's what makes Bose the most respected name in sound.

It's my pleasure to introduce you to the latest advancements in noise reduction technology from Bose – the Bose® QuietComfort® 15 Acoustic Noise Cancelling® headphones.

These are the **best** performing headphones from Bose. Significant advances in noise reduction make these the **quietest Bose headphone ever**. QC15 headphones separate Bose from everyone else because they deliver an unmatched combination of:

- Noise Reduction
- Audio Performance
- Comfort

They are especially popular for the business traveler, because engine roar and train rattle fade even further away. When not listening to music, you can use these headphones to quickly leave the noise behind – and relax. And when you listen to music at home, work or anywhere else, fewer distractions get in the way.

Less noise, acclaimed lifelike sound, a fit that stays comfortable for hours and the quality you expect from Bose. It all adds up to a combination of benefits unmatched in the industry.

The Bose® QuietComfort® 15 Acoustic Noise Cancelling® headphones deliver a premium performance. When you reward your employees and customers with a Bose product such as the QC® 15 headphones, you're giving them the gift of quality sound - and the reward is lasting.
